function in python instead of checking types using string tokens to represent types
tions to calculate the booking duration for each type instead of writing all cases multiple times in the code so in the case of change in your code you need to change
e request assume that all events are happening in the real time day, well it's enough but I think it would be better if you change the signature of this function or at I
t builds messages for the user depending on the situation and accepts various arguments such as user, documentetc so it generates the corresponding message
this part of code. Only functional programming. It is better to use OOP
end a mail in fail_silently, because there could occur an error
at is it? For what reason do you use it?
the whole server. It is better to use external resources for this.
tring to store types of users? In python strings weigh a lot
lots of imports? Is it possible to avoid this?
first time of seeing this code to understand it clearly - maybe this problem can be solved via use

Part of the code	
101-103	I guess that it's very good solution be
101-103-221-223	I'm totally agree with you. But nethert
46	Yeah, it's good suggestion, but i thinl
66-118-145	Yeah, it's good.
1-250	Ok. Firstly, OOP is not the best way o
188-189	Yeah. Thanks. We'll fix that.
173-176	Ok. It's just bad code for debugging s
1-250	Yeah, it's looks true. But we need to
1-250	Totaly agree with you, we need ot wo

cause of reduced memory usage, but for this implementation we need to create inspection function, which could take more time for this. I think that we will change it furth
heles in future it could cause some problems with performance because function in python programming language can increase execution time. But yeah, it's good sugge
that in this case users won't have real 2-3 weeks to return they books. Some fines because of 6 hours in which users could return book can be dissapointing.
f programming. Secondly, this is view.py file which is control file where server just return back result. Also, i guess, that we somehow can name this file as object, very stra
so i think we need to somekind fix that, but at this moment i don't know how
choose which of them and check that it will realy increase time of work of the server.
rk on it
ave them. Thus we can't fix it
s our project and number of comments enough for understanding it to the creators.
